

REPORT

This document contains sample report produced by [HTML2PDF-X Pilot](#) library. The library will help you in a generation of PDF reports using the magic of [HTML](#).

The report contains three basic parts:

- *The table with data (text, images and hyperlinks);*
- *The diagram which illustrates table data;*
- *The description of species from table.*

Sales in 2012 year:

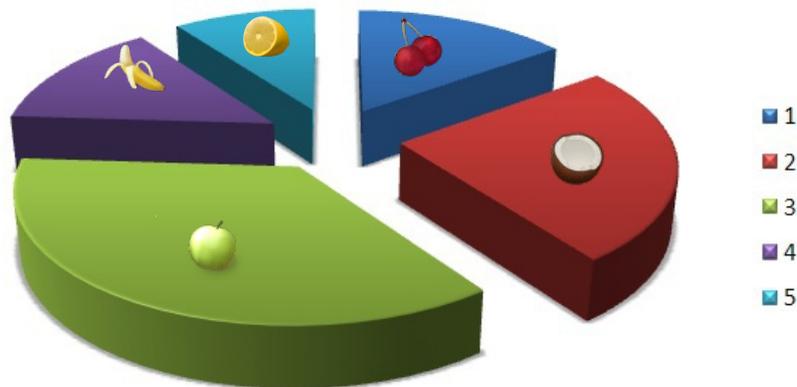

Serial num.	Product name	Description	Picture	Consumers	Share, %
003	Apples	Apples in boxes - 350 species		Johny , Mike	36
002	Coconuts	Coconuts - 20 species			25
001	Bananas	Bananas - 300 species			15
004	Cherries	Cherries - 10 kilos			14
005	Lemons	Lemons in boxes - 30 kilos			10

Banana is the common name for herbaceous plants of the *genus Musa* and for the fruit they produce. It is one of the oldest cultivated plants. They are native to tropical South and Southeast Asia, and are likely to have been first domesticated in Papua New Guinea. Today, they are cultivated throughout the tropics.

The **lemon** (*Citrus + limon*) is a small evergreen tree native to Asia, and the tree's ellipsoidal yellow fruit. The fruit's juice, pulp and peel, especially the zest, are used as foods. The juice of the lemon is about 5% to 6% citric acid, which gives lemons a sour taste.

The **cherry** is the fruit of many plants of the *genus Prunus*, and is a fleshy stone fruit. The cherry fruits of commerce are usually obtained from a limited number of species, including especially cultivars of the wild cherry, *Prunus avium*.

Sales

The **apple** is the pomaceous fruit of the apple tree, species *Malus domestica* in the rose family (Rosaceae). It is one of the most widely cultivated tree fruits, and the most widely known of the many members of *genus Malus* that are used by humans. Apples grow on small, deciduous trees. The tree originated in Western Asia, where its wild ancestor, *Malus sieversii*, is still found today.

The **coconut palm**, *Cocos nucifera*, is a member of the family *Arecaceae* (palm family). It is the only accepted species in the *genus Cocos*. The term coconut can refer to the entire coconut palm, the seed, or the fruit, which is not a botanical nut. The spelling cocoanut is an archaic form of the word.
